THE SCOREBOARD

75 TESTED. 12 SHOWED AN EDGE.

75 STRATEGIES TESTED

1
PASSED ALL 3
Beat random, held up on newer data, survived costs.

2
CAME CLOSE
Passed most tests, with one gap left.

9
SMALL EDGES
Made money on newer data, but not proven.

63
FAILED
Lost money, or no better than random.

All 12 are on pages 3–6, free. The 63 that failed are on pages 7–8, so you can skip them.

HOW WE TEST

1 **Beat random.** The same trades at random times, 2,000 runs.

2 **Hold up on newer data.** We judge 2024 to 2026 on its own.

3 **Survive costs.** Spreads, commissions and fees are included.

Won per $1 lost: total wins divided by total losses. $1.50 means $1.50 won for every $1 lost. **Worst drop:** the biggest fall from a peak.

Short on time? **See the 12 bots → page 10**

PART 1 · FREE STRATEGIES

BUY THE DIP AFTER 3 RED DAYS

PASSED ALL 3 S&P 500, Nasdaq 100, Dow · daily charts · 448 trades

1 **Wait for 3 red days in a row.**
A red day closes lower than the day before.

2 **Buy at the close of the third red day.**
You buy after a short, sharp fall.

3 **Sell at the close of the first day that closes higher.**
Most trades last only a few days.

4 **No stop, no target.**
The higher close is the only exit.

BEAT RANDOM
1,999 of 2,000
random-timing runs.

NEWER DATA
$3.98
won per $1 lost, 2024–2026, 98 trades.

COSTS
2× costs
Included, and it still held up at double.

> **The catch:** it exits on the same day's closing price, which flatters it a little. The mirror version (sell after 3 green days) failed.

> Want it on autopilot? Our Buy the Dip bot runs this on the S&P 500 with one extra exit rule: **$8.75** won per $1 lost, 2024 to Sep 2026 (backtest). → **page 13**

The 12 bots we built → page 10

PART 1 · FREE STRATEGIES

SELL IN MAY

PROMISING Near miss · S&P 500 since 1950 · 75 years

1 **Buy the S&P 500 at the last close of October.**
Winter is November to April.

2 **Sell at the last close of April.**
That is one trade a year.

3 **Stay in cash from May to October.**
You skip the summer.

WINTERS VS SUMMERS
54 of 75
years winter came out ahead.

BEAT RANDOM
1,991 of 2,000
random six-month windows.

SINCE 2001
1,679 of 2,000
just under our bar of 1,800.

Why a near miss: it was strong over 75 years, but the edge faded after 2001.

The 12 bots we built → page 10

PART 1 · FREE STRATEGIES

HEDGE-FUND TREND FOLLOWING

PROMISING Near miss · 7 markets · monthly · 565 market-months

1 **Once a month, check each market's last 12 months.**
Nasdaq 100, Dow, gold, silver, GBP/USD, USD/JPY, USD/CHF.

2 **Up over the year: buy. Down: sell.**
You bet that the trend carries on.

3 **Bet less on wilder markets.**
Every market carries about the same risk.

4 **Hold for one month, then repeat.**
From a 2012 paper by Moskowitz, Ooi and Pedersen.

ALL YEARS	OLDER DATA	NEWER DATA
$1.13	**$0.99**	**$1.38**
won per $1 lost.	won per $1 lost: no edge.	won per $1 lost, 2024–2026.

Why a near miss: a handful of trades did most of the work. The paper used 58 markets; we tested 7.

The 12 bots we built → page 10

PART 1 · FREE STRATEGIES

SMALL EDGES: 9 THAT MADE MONEY

STRATEGY	MARKET	RULE	VERDICT
Trendline breakout	Nasdaq · 1-hour	Buy a close above a falling trendline; sell a close below a rising one.	SMALL EDGE
Golden cross 50/200	8 markets · 4-hour	Runs inside our Titan, Orbit, Nova bots (pages 20–21).	SMALL EDGE
MACD cross	Nasdaq · 1-hour	Buy when MACD crosses up through its 9-bar average; sell when it crosses down.	SMALL EDGE
First 5-minute candle breakout	Nasdaq · 5-minute	First 5-minute candle green: buy. Red: sell. Stop at its far end.	SMALL EDGE
Buy the red day	S&P, Nasdaq, Dow · daily	Same idea as our Buy the Dip bot (page 13).	SMALL EDGE
Buy at all-time highs	Nasdaq 100 · daily	Buy the day after a record close; sell 21 trading days later.	SMALL EDGE
Up the day before a holiday	S&P, Nasdaq, Dow · daily	Hold only the last session before a holiday: buy the prior close, sell its close.	SMALL EDGE
Country index momentum	10 country indices · monthly	Each month, buy the 5 of 10 country indices with the best 12-month return.	SMALL EDGE
Pairs trading	10 country indices · monthly	Pair up indices that move together; buy the cheaper, sell the dearer when they split.	SMALL EDGE

> A small edge is real money on paper, and easy to lose to slippage, bad fills or one bad year.

The 12 bots we built → page 10

PART 2 · WHAT FAILED

THE FAMOUS ONES THAT FAILED

Skip these and you save yourself months.

STRATEGY	WHAT IT PROMISES	WHY IT FAILED
Fair value gap (FVG) retest	Price returns to fill the gap. Buy the retest.	**Barely broke even, then lost on newer data.**
"FVGs always fill"	Gaps almost always get filled.	**78% filled, but fake random gaps filled 76%.**
ICT Silver Bullet	A 70% win rate from one hour a day.	**Won 33% of trades, not 70%.**
Order blocks	Big players leave zones that price returns to.	**0 of 103 market and timeframe tests made money.**
Candlestick patterns (all 16)	Famous candle shapes predict the next move.	**None of 16 patterns beat random entries.**
RSI under 30 = buy	Oversold means a bounce is due.	**Only 44 in 100 trades made money.**
London breakout	+30 pips a day on the euro.	**Lost 1,197 pips instead.**
Grid trading bot	A bot that wins almost every time.	**94% of cycles won, and it still lost money.**
Martingale (double after a loss)	Double after every loss and you always recover.	**94.8% of 10,000 simulated accounts blew up.**

The 12 bots we built → page 10

THE REST THAT FAILED

Each one lost money or did no better than random entries.

SMART MONEY & ICT 6

ICT breaker block · Change of character (CHoCH) · ICT Power of 3 (AMD) · ICT Judas swing · Liquidity sweep / stop hunt · Sweep + order block + FVG "sniper"

CHART PATTERNS, LEVELS & CANDLES 15

Supply & demand zones + EMA 8 · Break and retest · Support/resistance bounce (4th touch) · Fibonacci 0.618 · Head and shoulders · Double top / bottom · Bull flag · 4-hour range breakout fade · Opening gap fill · Hammer candle · Engulfing candle · Inside bar breakout · Heikin Ashi · Pivot points · Round numbers hold

INDICATORS & MOVING AVERAGES 12

9/21 EMA cross · EMA ribbon 8/21/55 · "Only trade above the 200 EMA" · 20 EMA pullback · Parabolic SAR · Stochastic 20/80 · Bollinger band bounce · Supertrend · VWAP pullback · UT Bot + STC "99% scalper" · Stochastic oversold buy · Bitcoin pullback in an uptrend

SESSIONS & TIME OF DAY 7

Overnight anomaly (hold overnight) · Trade the first hour · Power hour (last hour) · First 30 min predicts last 30 · Trade the Fed-day spike · Jobs report (NFP) · Bitcoin late-night hours

"3 green days, a red day is due" · Santa rally (buy December) · Turn of the month · Monday / weekend effect · Moon phase · Option-expiration week · Payday (16th of the month)

BOT & MONEY TRICKS 1

Sell at −4% from the peak

MACRO & QUANT 4

Crypto rebalancing · "Oil predicts stocks" · Currency momentum · Commodity momentum

WHOLE-CONCEPT SWEEPS 2

Volume profile / POC / anchored VWAP · Daily bias / CRT

The 12 bots we built → page 10

PART 3 · WHAT WE LEARNED

WHAT 75 BACKTESTS TAUGHT US

1 **A HIGH WIN RATE MEANS NOTHING.**
The grid bot won 94% of its cycles and still lost money.

2 **RANDOM IS THE REAL BENCHMARK.**
12 strategies did no better than coin flips, and most people never check.

3 **THE BEST OF MANY VERSIONS USUALLY FAILS.**
Power hour: the best of 32 versions won $1.35 per $1 lost on old data, then $0.96 on newer data.

4 **COSTS KILL FAST STRATEGIES.**
Bitcoin late-night trading doubled before fees and lost 78% after fees.

5 **SIMPLE BEAT CLEVER.**
The only survivor is plain: buy after 3 red days. None of the 10 smart-money setups survived.

BEFORE YOU BUY ANY TRADING BOT, ASK 3 QUESTIONS

- ☐ Does it beat random coin flips? Ask for the test.
- ☐ Does it still work on newer data, years it was not built on?
- ☐ Is it still positive after spreads, commissions and fees?

"If a seller can't answer all three, you're looking at a curve, not an edge."

Our 8 single bots each beat random entries in at least 1,916 of 2,000 tests. All 12 held up on 2024–2026 data, after costs.

→ page 10

The 12 bots we built → page 10

PART 4 · THE 12 BOTS

WE REBUILT THE ONES THAT FAILED

Same ideas, on other markets and with stricter rules. Then the same 3 tests again.

IDEA	AS COMMONLY TAUGHT	OUR BOT (WON PER $1 LOST, 2024 TO SEP 2026)	PAGE
Fair value gap / gap reversal	$0.98 won per $1 lost on newer data	Ion **$1.91**	12
ICT Silver Bullet	Won 33% of trades, not 70%. $0.95 per $1 lost	ICT Silver Bullet **$1.62**	15
Opening gap fill	Best version $0.95 on newer data	Opening Gap Fill **$1.43**	14
Change of character (CHoCH)	No better than random entries	CHoCH **$1.45**	16
Double top / bottom	Lost money on newer data	Double Top/Bottom **$1.26**	17
20 EMA pullback	$0.94 on newer data	20 EMA Pullback **$1.24**	19
Bollinger band bounce	Lost money even before fees	Bollinger Band Bounce **$1.17**	18
Buy the dip after 3 red days	Passed all 3: $3.98	Buy the Dip **$8.75** small sample	13
Run several at once	n/a	Titan, Orbit, Nova, Quasar	20–21

Hypothetical backtests after costs. "As commonly taught" = our test of the textbook version (pages 3, 7 and 8). The bots trade other markets or timeframes, so the numbers are not like-for-like.

Ion

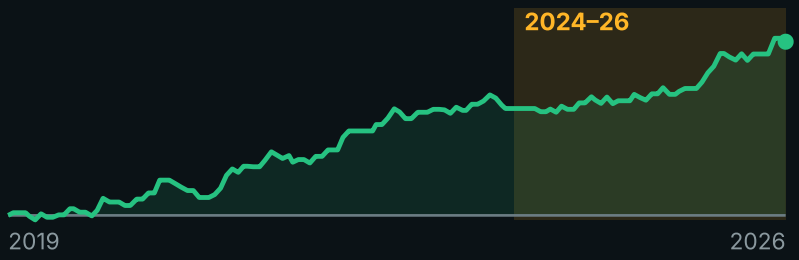

PRO

Nasdaq 100 · 5-minute

$1.91

won per $1 lost, 2024 to Sep 2026

Account growth since 2019: **+54%**

$100,000 account, after costs. Hypothetical backtest.

WORST DROP	UP YEARS	TRADES A MONTH	BEAT RANDOM
5.7%	8 of 8	1.4	2,000 of 2,000
	2026 counts as a part year		

WHAT THE BOT DOES FOR YOU

- Watches the first 90 minutes of the New York session for you, every trading day.
- Skips small gaps and only takes the big ones.
- Sets its stop and target the moment it enters.

Ion trades the reversal after big price gaps in the first 90 minutes of the New York session on the Nasdaq 100. The textbook gap strategy failed our tests (page 7). Ion is much stricter about which gaps it takes and where it enters.

EXACT SETTINGS: INCLUDED WITH THE BOT

Blurred here.

Hypothetical backtest on a $100,000 account, 2019 to Sep 2026, after costs. Won per $1 lost covers 2024 to Sep 2026.

BUY THE DIP

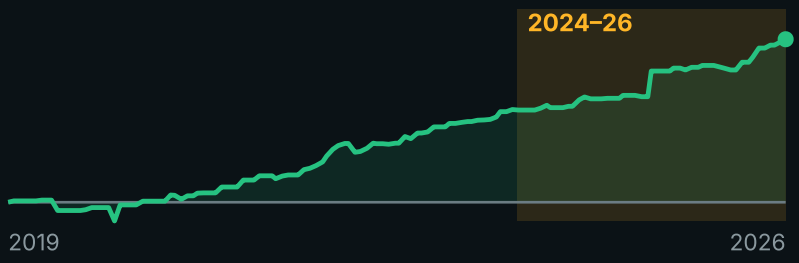

PRO

S&P 500 · Daily

$8.75

won per $1 lost, 2024 to Sep 2026

Account growth since 2019: **+51%**

$100,000 account, after costs. Hypothetical backtest.

WORST DROP	UP YEARS	TRADES A MONTH	BEAT RANDOM
6.5%	7 of 8	1.0	1,999 of 2,000
	2026 counts as a part year		

WHAT THE BOT DOES FOR YOU

- Checks the S&P 500 close every day and buys after the third red day.
- Adds one exit we found: if no higher close comes, it sells after a set number of days.
- Trades about once a month, so there's nothing to watch.

Buy the Dip buys the S&P 500 after three red days in a row and sells when it closes higher. It is the free strategy from page 3, run as a bot. It trades about once a month.

EXACT SETTINGS: INCLUDED WITH THE BOT

Blurred here.

Buy	**After 3 red days in a row**	Sell	**At a higher close, or after [blurred] days at most**
Stop	**None**

$1.43

won per $1 lost, 2024 to Sep 2026

Account growth since 2019: **+37%**

$100,000 account, after costs. Hypothetical backtest.

WORST DROP	UP YEARS	TRADES A MONTH	BEAT RANDOM
8.6%	7 of 8	3.9	2,000 of 2,000
	2026 counts as a part year		

WHAT THE BOT DOES FOR YOU

- Measures the gap at the New York open and only trades the mid-size ones.
- Checks the trend first, then places its stop and target.
- Flat by midday, so nothing is held overnight.

Opening Gap Fill bets that the gap between yesterday's close and today's open gets filled. It trades the S&P 500 and is flat by midday. The plain version failed on the Nasdaq (page 8); this one only takes mid-size gaps.

EXACT SETTINGS: INCLUDED WITH THE BOT

Blurred here.

Gap size	**between [blurred] % and [blurred] %**	Gap vs recent range	**at most [blurred] × the daily range**

DOUBLE TOP/BOTTOM

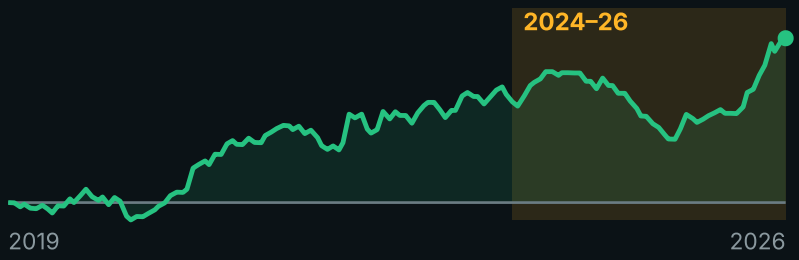

CORE

GBP/USD · 15-minute

$1.26

won per $1 lost, 2024 to Sep 2026

Account growth since 2019: **+45%**

$100,000 account, after costs. Hypothetical backtest.

WORST DROP	UP YEARS	TRADES A MONTH	BEAT RANDOM
14.8%	7 of 8	3.2	1,966 of 2,000
	2026 counts as a part year		

WHAT THE BOT DOES FOR YOU

- Finds two equal highs or lows on GBP/USD and waits for the break.
- Trades both ways: sells double tops, buys double bottoms.
- Puts its stop just beyond the top on its own.

Double Top/Bottom sells when price closes below the dip between two equal highs, and buys the mirror image after two equal lows. It trades GBP/USD on the 15-minute chart. The textbook version failed on EUR/USD (page 8).

EXACT SETTINGS: INCLUDED WITH THE BOT

QUESTIONS

READY TO RUN THEM?

Do I need a PC?

Yes, a computer or a cloud VPS. The bots run inside cTrader or MetaTrader 5 and only trade while it is open and online. A VPS is a rented computer that is always on. Phone apps can't run the bots.

How much money do I need?

There is no fixed minimum. Each bot sizes every trade as a share of your balance, 1% risk per trade by default. On a very small account the broker's smallest trade may not fit that, so start on a free demo account.

Can I cancel?

Yes. Memberships cancel any time, and then the bots stop opening new trades. Bots you buy once are yours to keep.

Can I try a bot first on demo?

Yes. Every bot runs on a free demo account at your broker, so you can watch it trade before you go live.
